Skills and Tools

Oct 13, 2026 · @faizanch

Proficiency levels are my best guess from your projects. Change any that don't match: Advanced = use it daily and can build complex things alone; Intermediate = have built real projects with it; Beginner = have used it in a few small projects.

Overview

I'm M Faizan, an AI Engineer who started in web and mobile development. My strongest skills today are in Python and AI, especially Retrieval-Augmented Generation (RAG) and working with large language models. I also have solid experience building mobile apps in Flutter and web apps with React and the MERN stack, so I can take an AI idea all the way to a working product that people can use.

Programming Languages

- **Python: Advanced.** My main language for AI work, backends, and automation.
- **JavaScript: Intermediate.** Used in React and MERN stack projects.
- **Dart: Intermediate.** Used for all my Flutter apps.
- **C++: [Intermediate].** Learned during my degree; good grasp of fundamentals and problem-solving.
- **HTML and CSS: Intermediate.** For building and styling web interfaces.

AI, Machine Learning and NLP

- **Retrieval-Augmented Generation (RAG): Advanced.** Built a multilingual RAG system with hybrid search, reranking, cited answers, and Graph RAG.
- **Large Language Models (LLMs): Advanced.** Prompt design and integration with APIs like Groq and Gemini.
- **Embeddings and vector search: Advanced.** Benchmarked embedding models (BGE, E5, Instructor) and vector databases.
- **NLP: Intermediate.** Language detection, named entity recognition with spaCy, and multilingual text in English, German, and Urdu.

- **Hugging Face Transformers: Intermediate.** Using pretrained models for classification, reranking, and embeddings.
- **AI safety for LLM apps: Intermediate.** Detecting prompt injection, jailbreaks, toxic content, and personal data.
- **Multi-agent systems: Beginner.** Currently building my first agent-based system.

AI Libraries and Tools

- **FAISS, Chroma, Milvus: Advanced / Intermediate.** Vector databases for semantic search.
- **sentence-transformers and cross-encoders: Intermediate.** For embeddings and reranking.
- **BM25 (rank_bm25): Intermediate.** Keyword search combined with vector search.
- **spaCy and NetworkX: Intermediate.** Entity extraction and knowledge graphs.
- **OCR tools: Intermediate.** Extracting text from scanned documents.
- **LangChain / LlamaIndex: [Beginner].** I usually build RAG components directly in Python.

Backend and APIs

- **FastAPI: Advanced.** Built REST APIs for serving AI systems.
- **Flask: Intermediate.** Used for document processing pipelines.
- **Node.js and Express: Intermediate.** Backends for MERN stack apps.
- **REST APIs: Advanced.** Building and consuming APIs across web, mobile, and AI projects.

Mobile Development

- **Flutter: Intermediate to Advanced.** Built several apps including an AI-driven auction app (my FYP), a video calling app, an expense tracker, a weather app, and a to-do app.
- **Firebase: [Intermediate].** Authentication and real-time data for mobile apps.

Web Development

- **React: Intermediate.** Built an e-scooter website, a chat application, and the interface for my RAG system.
- **MERN stack (MongoDB, Express, React, Node.js): Intermediate.** Gained during my internship at Comrex Pvt Ltd.
- **Tailwind CSS: Intermediate.** For fast, responsive styling.
- **Frontend development: Intermediate.** Gained during my internship at Mediatainment.

Databases

- **MongoDB: Intermediate.**
- **SQLite / Hive: [Intermediate].** Local storage in Flutter apps.
- **Vector databases: Advanced.** FAISS, Chroma, Milvus.

Developer Tools

- **Git and GitHub: Intermediate.** Version control for all my projects.
- **VS Code: Advanced.** My main editor.
- **Python virtual environments and pip: Advanced.**
- **Postman: [Intermediate].** Testing APIs.
- **Testing with pytest: Intermediate.** Wrote over 100 tests for my RAG security layer.

Languages I Speak

- **English: Fluent.** IELTS band 7.
- **Urdu: Native.**
- **[Punjabi: Fluent]**

Soft Skills

- Problem-solving and breaking big problems into small steps.
- Learning new tools quickly, which helped me move from web development into AI.
- Building end-to-end: I can work on the AI, the backend, and the user interface.
- Teamwork and communication, built through internships and university projects.
